Abstract: Summarize the study, including the problem, methods, key findings, and implications. (Typically 150 – 250 words).

Key Words*: 5 keywords (Italic)*

I. INTRODUCTION

The introduction explains why this research is important or necessary or important/ Begin by describing the problem or situation that motivates the research. Move to discussing the current state of research in the field; then reveal a "gap" or problem. These must be supported with an appropriate literature review.

Finally, explain how the present research is a solution to that problem or gap.

II. METHODS

The methods section tells readers how you conducted your study. It includes information about your population, sample, methods, and equipment. The "gold standard" of the methods section is that it should enable readers to duplicate your study. The methods section is that it should enable readers to duplicate your study. Methods sections typically use subheadings; they are written in past tense, and they use a lot of passive voice. This is typically the least-read section of an IMARD report.

III. RESULTS

In this section, you present your findings. Typically, the Results section contains only the findings, not any explanation of or commentary on the findings. Results sections are usually written in the past tense. Make sure all tables and figures are labeled and numbered separately. Captions go above tables and beneath figures

IV. DISCUSSION

In this section, you summarize your main findings, comment on those findings, and connect them to other research, e.g., the review of related literature in the Introduction section. You also discuss the limitations of your study and use these limitations as reasons to suggest additional, future research.

V. CONCLUSION

Summarize the key findings, their importance, and the broader implications.

VI. RECOMMENDATION

List of recommendation
